## EXPERIENCE

### Censys — *Senior Software Engineer*

SEPTEMBER 2022 - MAY 2025 – SEATTLE, WA – REMOTE

- Served as a founding engineer on a complete rebuild of the company's flagship platform, defining frontend architecture, design systems, and coding standards that improved reliability, scalability, and developer velocity across multiple teams.
- Integrated deeply with backend inventory pipelines in Go and Scala to unify asset risk data across multiple services—aggregating vulnerabilities, certificates, and service metadata into a single queryable workflow that improved detection accuracy and data freshness.
- Drove 110+ new paid customer adoptions in 30 days by launching key frontend initiatives—including SAML SSO, RBAC for access tokens, and a host history log redesign—built with Remix, React, and TypeScript to enable a new product-led growth motion.
- Reduced critical bug backlog by 300% through a revamp of bug triage processes, creating new categorization protocols and team handling guidelines.
- Mentored engineers across frontend and full-stack domains, documenting best practices and scaling knowledge-sharing across the organization.

### Censys — *Software Engineer II*

MAY 2021 - SEPTEMBER 2022 – ANN ARBOR, MI – REMOTE

- Partnered with enterprise customers to redesign the Risks feature, integrating with backend APIs and Postgres data models to clarify asset exposure and remediation steps, increasing feature engagement and trust.
- Accelerated end-to-end testing by 398% via parallelization and CI/CD improvements, reducing test cycles from hours to minutes.
- Built internal cron jobs and data pipelines to snapshot and compare key asset metrics (services, certificates, open ports), providing context for security trends across scans.
- Developed and optimized RESTful APIs supporting large-scale asset inventory management, handling millions of asset records, improving query performance and integration reliability for enterprise users.

### Censys — *Software Engineer I*

MAY 2020 - MAY 2021 – ANN ARBOR, MI – REMOTE

- Implemented API-aligned Python SDKs that doubled customer API adoption rates, bridging backend capabilities with developer-facing usability.
- Built two internet-wide scanning systems in Go that added millions of new service fingerprints, significantly expanding Censys's global internet intelligence dataset.

## TECHNICAL SKILLS

**Frontend:**

- React
- Remix / React Router
- TypeScript
- JavaScript
- HTML5
- CSS
- Redux
- Next.js

**Backend & API Development:**

- Node.js
- Go
- Python
- C / C++
- REST
- gRPC
- GraphQL

**Tooling & Infrastructure:**

- Github Copilot
- Cursor
- SQL (PostgreSQL)
- Git
- Bash
- macOS/Windows

**Core Competencies:**

- Full Stack Development
- Reliability Engineering
- Agile/Scrum
- Mentorship
- Cross-functional Collaboration
- Customer Collaboration

## EDUCATION

**University of Michigan**
**College of Engineering**
Ann Arbor, MI
*B.S.E. Computer Science, Cum Laude*
CLASS OF 2020
